Summary of the Survey

Early childhood is a pivotal period of development. Childhood experiences—both positive and negative—affect the development of motor, cognitive, social, and language skills. Studies have shown that vulnerability in kindergarten has been associated with difficulties in social adjustment and school success. Indeed, nearly half of the vulnerable children in kindergarten will have lower-than-average school performance by the fourth grade.

The Quebec Survey of Child Development in Kindergarten (QSCDK),2 carried out by the Institut de la statistique du Québec in 2012 and 2017 in all public and private French and English speaking schools in the province (excluding students who were handicapped or with adaptation/learning difficulties) provides a means of measuring the development of groups of children. As part of this study, teachers filled out a questionnaire consisting of 104 questions that had been validated and used in other provinces and countries for each of their students.3 It should be pointed out that this questionnaire was based on observable behaviours related to developmental norms and was not designed to evaluate the curriculum, nor teacher/school performance.

Domains Assessed

The questionnaire made it possible to assess the proportion of vulnerable children in the following five domains:

Domain	Topics of Interest					
Physical health and well-being	General physical development, motor skills, diet and dress, cleanliness, punctuality, alertness					
Social competence	Social skills, self-confidence, sense of responsibility, respect of peers, adults, rules, and routines, work habits and autonomy, curiosity					
Emotional maturity	Prosocial behaviour and mutual help, fear and anxiety, aggressive behaviour, hyperactivity and inattention, expression of emotions					
Cognitive and language development	Interest and skills in reading, writing, and mathematics; adequate language use					
Communication skills and general knowledge	Ability to communicate so as to make themselves understood, capacity to understand others, clear articulation, general knowledge					

Children are considered vulnerable when their score in an area of development is equal to or lower than the threshold established in Quebec in 2012 (10th percentile of the distribution of results in the first cycle of the survey).

These children are:

- → facing a challenge because their mastery of certain aptitudes or skills is lacking,
- → less equipped to take full advantage of what school can offer, and
- → more likely to experience difficulties in school.

Information and mobilization activities will also be provided throughout 2019.

Findings for the LSN of Haut-Saint-François

In the Estrie region served by the health and social services system (CIUSSS de l'Estrie – CHUS), **300 kindergarten teachers** completed the QSCDK questionnaire for **4628 children** in **144 schools**, between February and April 2017, yielding a **93%** response rate. The following table breaks down the proportions of vulnerable children by domain of child development (showing vulnerability in at least one domain).

Proportion of Vulnerable Children by Developmental Domain

Domain	LSN OF HAUT-SAINT-FRANÇOIS			ESTRIE			QUEBEC		
	2012	2017	Évolution	2012	2017	Évolution	2012	2017	Évolution
Physical health and well-being	13.1	13.1	Stable	9.8	11.4	Increase	9.5	10.6	Increase
Emotional maturity	9.4	14.4	Stable	10.1	13.3(+)	Increase	9.7	11.5	Increase
Social skills	6.7	11.3	Stable	9.7	12.6(+)	Increase	9	10.2	Increase
Cognitive and language development	9.5	14.3	Stable	10.7	13.2(+)	Increase	10	11.1	Increase
Communication skills and general knowledge	7.5	10.9	Stable	10	11.4	Increase	10.8	11.1	Stable
At least 1 domain	29.7	30.4	Stable	26.8	29.4(+)	Increase	25.6	27.7	Increase

(+): Figure significantly higher than in the rest of Quebec (threshold of 0.05).

Decrease/increase: Significant difference between the two cycles (threshold of 0.05 for Estrie and all the LSN and 0.01 for Quebec)

In 2017, the population of kindergarten-aged children in the LSN of Haut-Saint-François was approximately **260**, with **30.4%**— approximately 80 children—demonstrating vulnerability in at least one domain of child development. The Haut-Saint-François findings are similar to that of the province as a whole. While there was an upward trend in the region in four of the five domains from 2012 to 2017, the increase cannot be confirmed as being statistically significant (not due to chance), given the small number of children.

The Most Vulnerable Subgroups

In both the Estrie region and the province, the proportion of children vulnerable in at least one domain is greater in certain subgroups: boys, children under the age of 6 years, children who do not have French as their mother tongue, children born outside of Canada, children who live in underprivileged areas, and children who did not regularly attend day care before starting school. Approximately 7% of children in Haut-Saint-François have English as their mother tongue.

Percentage of Children Vulnerable in at least One Domain (2017)

CHARACTERISTICS	LSN OF HAUT-SAINT-FRANÇOIS	ESTRIE	QUEBEC					
Population breakdown	30.4	29.4(+)	27.7					
By sex								
Boys	42.3	37.4(+)	35.0					
Girls	18.7	20.6	20.2					
By age								
Under 6 years of age	33.8	33.2	31.7					
6 years or older	26.3	25.4	23.5					
By spoken languages								
At least French	28.4	27.1	25.6					
English but not French	56.5	50.3(+)	36.8					
Neither French nor English	np	46.1(+)	34.6					
By place of birth								
Canada	30.4	28.6	27.3					
Outside of Canada	np	52.4(+)	33.6					
According to physical and social deprivation								
Privileged	*33.4	22.5	22.9					
Average	24.7	28.8	27.1					
Underprivileged	41	40.5(+)	34.6					
Regular day-care attendance before starting school								
Yes	28.6	26	24.9					
No	36.9	41.4	38.5					

Some situations in the Estrie region are especially troubling. The differences are often greater in Estrie, as represented in the table, than in the province as a whole. To illustrate, the rate of vulnerability is almost two times higher among English-speaking children in the Estrie region than those who have French as their mother tongue, while the provincial ratio is at 1:4. In addition, vulnerability increased from 2012 to 2017 amongst boys (from 33.7% to 37.4%) and amongst children living in underprivileged areas (33.8% to 40.5%).

(+): Figure significantly higher than in the rest of Quebec (threshold of 0.05).

*: Coefficient of variation greater than 25%. The proportion is presented for informational purposes only. np: The data is not presented because of the small number of children or for reasons of confidentiality.
